

# Exhibit 8 - LaSalle Waterworks District Statement of Excess Capacity

LASALLE WATERWORKS DISTRICT #1  
P.O. BOX 1  
TROUT, LA. 71371

February 2, 2016

## POTABLE WATER CAPACITY

The LaSalle Waterworks District #1 maintains three ground water wells with a 24 hour pumping capacity of 1,108,800 gallons of water per day. We currently pump around 8 hours per day. Talked with engineers and water well driller and they said typically not to run water wells more than 16 hours per day, this gives the time for the water wells to recover. I feel safe and they do also to say that LaSalle Waterworks District #1 can supply **150,000 gallons of water per day**. See attached breakdown of water wells if any questions, please feel free to call at 1-318-992-3530.

Thank you,

Superintendent John Smith
